Kevin **Duffy**

Full Stack Web Developer

646-714-9437 | KevinDuffy615@gmail.com | KevinDuffy.dev | Soadaa56

Skills

Languages	Ruby, JavaScript, TypeScript, SQL, Bash, Python
Frameworks	Rails, Express, Hotwire, Vue, Bootstrap
Databases	PostgreSQL, SQLite
DevOps / Cloud	Git, GitHub, SSH, Kamal, Docker, AWS VPS
General	Linux & Windows troubleshooting, FFmpeg, Command-line workflows

Projects

Milk'N'Thingzz

https://milknthingzz.xyz

- Ruby on Rails, Devise, Kamal, Docker, AWS, PostgreSQL, Bootstrap, Stimulus.
- Full-stack Rails application for managing and showcasing user-generated artwork.
- Migrated production Rails application from AWS EC2 to Lightsail with zero data loss, reducing infrastructure costs while maintaining uptime.
- Designed and implemented a role-based authentication system supporting user comments, edit history, and moderation features using Devise.
- Developed an administrative dashboard for managing uploads, categorization, and publication of site content.
- Refactored legacy CSS into a mobile-first responsive layout improving usability across desktop and mobile devices.
- Designed a hierarchical category and subcategory system for organizing user-generated artwork.

Personal Blog

HTTPS://blog.soadaa.xyz

- Ruby on Rails, Kamal, Docker, AWS, SQLite, Stimulus.
- Mobile-first full-stack Rails blog designed for publishing long-form content.
- Implemented Markdown rendering for posts with custom styling and formatting support.
- Designed hierarchical categories and subcategories to improve content organization and navigation.
- Developed a customizable theme system supporting five user-selectable color schemes with theme preference stored in localStorage across browsing sessions.
- Implemented an ATOM feed for content syndication.
- Improved production stability by diagnosing memory limitations and configuring Linux swap space, enabling two production Rails applications to run reliably on a shared server.
- Automated daily database backups using cron and compression scripts.

Board Game Rating Site

API Integration Project

- Designed a custom service object for integrating the BoardGameGeek XML API, automatically importing game metadata and media into the application.
- Implemented a search feature that automatically populates new game entries with title, description, ratings, and images from the API.
- Built sortable game lists (alphabetical, user rating, BGG rating) with a site-wide search for easy navigation.

Internal Inventory Management App

Node.Js Express Project

- Developed an inventory management application using Node.js, Express, Bootstrap and PostgreSQL.
- Integrated a relational database and wrote raw SQL queries to manage inventory data, enabling CRUD functionality for core business objects.

KevinDuffy.Dev (Portfolio Website)

https://kevinduffy.dev

- Designed and developed a responsive portfolio with semantic HTML and CSS.
- Implemented SEO and image optimization.

Education

CUNY - College of Staten Island (CSI)

Staten Island, New York

B.S. in Accounting

Jan. 2013 - May. 2017
